Abstract (en)
[origin: EP1559671A1] In an elevator door with a window according to the present invention, an opening 1c is formed in a door panel 1, and a glass plate 2 having substantially the same shape as the opening 1c is fitted into the opening 1c. In an edge portion of the opening 1c, a fixing member 3 is arranged in each of both side portions of the glass plate 2. A urethane or silicon elastic adhesive 4 is provided between, while in direct contact with, a peripheral edge portion of the glass plate 2 and the fixing member 3. The elastic adhesive 4 serves to fix the fixing member 3 onto the door panel 1 and fix the glass plate 2 onto the fixing member 3. <IMAGE>
