Abstract (en)

[origin: EP0935034A1] An anchoring device which is not accessible on one of its sides can be made by preparing a cavity (11) and using different tensioning parts (4), each having an end portion with an adapted shape. The cavity can be obtained by concreting an anchoring part (1) having an opening (12) on one of its ends. After concreting the anchoring piece in the cavity, a sealing mortar is introduced into the cavity so as to lock the ends of the tensioning parts in the cavity.
