Abstract (en)
The oven (1) with a baking chamber (3) has a heater assembly (4) fixed to its vertical rear wall (2) in order to generate a forced flow of hot air (6). The heater assembly (4) is fitted in the oven by means of a single installation operation and comprises a support device (7) acting as a single coupling and supporting means, a blade fan (8), a panel or flat substrate (11) carrying a flat heating resistor (12) and electrical connection means (16). The connecting and support device (7) is made up of a central plate (7a) from the periphery of which extend a number of radial arms (13) which support the flat ring-shaped panel (11) separate at a space width "W" from the rear wall, the ducts for heating said air flow (6) being formed between both the rear (2) and the adjacent (2a) chamber walls.
