Abstract (en)

[origin: WO2004043645A1] The invention relates to a mounting device (10) for positioning at least one machined part (12) which comprises a system for controlling the position of said part (14). The inventive system for position control of the part (14) is embodied in the form of a detection unit (16) which makes it possible to carry out a contactless position control of a part.
