Abstract (en)

[origin: US2004079052A1] A method of making a resealable package is provided. The method comprises providing an assembly that has a header section and a closure mechanism comprising first and second closure profiles constructed and arranged to selectively interlock. The method further includes providing a package comprising first and second panel sections joined together to define an enclosed region, first and second opposite side edges, a bottom and a mouth that provides access to the enclosed region. Finally, the method comprises attaching the assembly to the package such that the header section is attached to the closure mechanism at a point between the closure profiles and the bottom of the package.
