Abstract (en)
[origin: WO2004040125A1] A valve for control of a fluid is disclosed, in particular with electromagnetic operation, comprising a valve closing member (14), which controls a fluid flow from an inlet side to an outlet side and which cooperates with a valve seat (26), embodied as a flat seat on a valve plate (28). According to the invention, nozzles (30) are embodied on the valve plate (28) which lead to the outlet side and which may be sealed by means of the valve closing member (14).
