Abstract (en)

[origin: WO2004040379A2] The invention relates to devices and methods for controlling an electrographic printer or copier. According to a first aspect of the invention, set times for controlling the imprinting of an individual sheet are established and monitored. According to a second aspect of the invention, the sheet distance between successive individual sheets is set in a highly precise manner to a predetermined set distance. According to a third aspect of the invention, a method and device for switching the operating mode are provided with which a fastest possible printing speed of the printer or copier is ensured.
