Abstract (en)

[origin: FR2847060A1] The method involves communicating a set of instructions of a transmitter with a receiver to direct a component in a recording mode by multiple activation functions. An action is applied to the instructions of the transmitter that are specific to a protected set. The functions of the recording mode are invalidated for turning on the mode. The action on the transmitter activates the recording mode of the receiver. An Independent claim is also included for a device for protecting a recording mode of a receiver in a security device.
