Abstract (en)

[origin: WO2004042888A1] The invention relates to an on-board power supply network comprising at least two partial on-board power supply networks in which respectively one supply voltage is available. The invention also relates to a consumer which is connected to one of the partial on-board power supply networks. The consumer can receive a supply voltage by means of two different supply lines. Said two supply lines are decoupled from each other by means of decoupling elements.
