Abstract (en)

[origin: EP1561888A1] The case has a locking bolt (4) to actuate a control rod (27) provided to be connected to a secondary case. A rod stop (44), under the action of a key-bit (6) and a cam (15), moves alternatively from a retraction position, during which the bolt is in unlocking position, to a blocking position of the control rod, during which the bolt is in locking position. An independent claim is also included for a multipoint lock.
