Abstract (en)  
[origin: EP1562007A2] Connection fitting for connecting at least one heating body to a heating circuit or heating system especially designed as a single-duct system comprises one switchable or controllable valve (1) connected to the heating circuit with a flow and return. The flow path of the heating medium from the heating circuit through the valve to the heating body and back is controlled by a tap cock (15). A bypass connection (35) is provided between the connections of the valve for the flow and return, i.e. a first connection (13) and a second connection (14). The bypass connection runs through the tap cock.
