Abstract (en)
[origin: EP1562263A1] The connector has a housing with a receiver, and a latching unit (18) which moves with respect to the housing from a pre-assembly position. An electrical contact secured by a latching unit (16) is inserted into a receiver. Guide ribs (26) for a seal (20) are provided between a region of a spigot-like housing section designed to receive the seal and the latching unit that supports the seal in an intermediate region.
