Abstract (en)

[origin: WO2004045784A1] The invention refers to the field of bottle-filling plants and more precisely it refers to a machine for rinsing and /or sterilizing bottles made of plastic or glass. The machine is of the turntable-type on which spraying nozzles (4) and grippers (7) are assembled for taking and overturning the bottles. The machine provides for a detection device (15) of the bottle on the nozzle; a first angular position sensing device (16) of the bottles for opening solenoid valves (17) that supply the nozzles and a second angular position sensor (20) for closing said solenoid valves.
