Abstract (en)

[origin: WO2004046298A2] The invention relates to a series-production method for the rapid, clean and reliable production of filled moulded bodies. Said method comprises the following steps: a) a particulate premix is compressed to form a compressed part (base moulded body) comprising at least one cavity, b) at least one active ingredient is introduced into the cited cavity in a liquid, gelatinous, pasty or solid form, and c) the openings of the (filled) cavities are sealed with a film. Labels adapted to the size of the surface of the tablet are cut out of the film and held by means of a vacuum, whereafter the surface of the tablet and/or the lower side of the labels is provided with an adhesive, and the labels are stuck to the tablets.
