Abstract (en)
[origin: WO2004046608A1] The invention relates to a light, which is provided with a supporting shaft and which comprises a holding unit that serves to hold the lamp. The light also comprises a flame protection unit, which is provided with a combustion-promoting opening, and appropriately comprises an supplementary unit. The invention is characterized in that its holding unit (A) consists of a lampholder (2), which serves to hold the lamp (4), and of a supporting shaft (1) (joined with a continuous transition of material). The outer wall of the lampholder (2), starting from the supporting shaft (1), widens in a slightly conical manner. The flame protection unit (B) is provided in the form of a single structural unit consisting of at least two parts having different diameters, of which the upper part is provided in the form of a transparent cup (6) and the lower part is provided in the form of a holding housing (7) that holds the lampholder (2). In addition, at least one combustion-promoting opening(s) (11) is/are made in the bottom metal sheet (10) of the cup (6).
