Abstract (en)
[origin: WO2004046635A1] The invention relates to a firearm comprising a flat metal surface (9) on which a barcode (11) is placed which serves to record information and, at the same time, to camouflage. This barcode is incorporated into the metal in such a manner that the lines or the spaces of the barcode (11) are formed by fine grooves or ribs. This firearm is preferably designed as a self-loading pistol having a plastic grip (1), and the barcode (11) is placed on at least one side of the bare slide or breech (3). The invention also relates to a method for producing a firearm of this type. This method involves burning the barcode into the flat metal surface by means of a laser treatment.
