Abstract (en)
[origin: WO2004044739A1] The invention concerns a device for producing and/or configuring an automation system. The device comprises a storage system (7) wherein are recorded the required and/or produced files, during production and/or configuration. A remote client (4) passes via an interface to access programme files and/or data files. The invention is characterized in that the interface includes first means (8) for transmitting to one or more remote clients (4) a copy of the or each file recorded in the storage system (7), the interface further comprises second means (6) for receiving from the or each remote client (4) files produced and/or modified.
