Abstract (en)

[origin: EP1563992A2] The construction-kit pressure mold (100) absorbs radiant energy (102). This energy is available for structuring the mold surface. It has at least one buffer zone (114), which is at least partly separated from the absorption zone (112). The buffer zone takes energy from the absorption zone and passes it on to the information zone (110).
