Abstract (en)

[origin: EP1564100A1] The wagon has a central beam (A) of width lower than the minimum inner spacing of the wheels of a transported road semi-trailer. The semi-trailer overlaps the beam, to permit the lowest point of the wheels to be much lower than the upper side of the beam. The beam supports bending stresses due to the weight of the semi-trailer as well as traction and collision forces.
