Abstract (en)

[origin: EP1564133A1] The system has a cradle (6) tilting between a life raft (7) storing position and release position, with respect to a case. The case has a lateral opening with a movable wall (3) integrated to a bulwark and tilting between a case's closed position and a case's open and life raft release position. The cradle and wall define an inclined ramp for guiding the raft under action of gravity, when the cradle and wall are in the release position. An independent claim is also included for a ship comprising a bulwark and a life raft storing and releasing system.
