Abstract (en)

This is a hose reel for winding up a hose. The invention provides a hose reel capable of neatly winding up a hose. The frame of a hose reel 1 is configured of a body case 11, and the drum for winding up the hose is rotatably supported in the body case 11. A guide part 32 for guiding the hose is disposed on the moving path of the hose to be wound up by the drum, the path being the front face 31 of the upper vessel 13 of the body case 11. The guide part 32 is provided with an inlet/outlet 33 through which the hose is inserted, and the upper opening edge of the inlet/outlet 33 constitutes an upper restrictive part 34 to obstruct the hose from escaping upward. The upper restrictive part 34 extends in a direction crossing the moving direction I of the hose to be wound, and forms an arch shape whose central part protrudes upward. <IMAGE>
