Abstract (en)

[origin: EP1564343A1] It is a connecting or extension element (P) for modular elements for the realization of aerated and/or elevated floors made of a linear element in thermoplastic material having generically U-shaped vertical section made of two lateral walls (P1) and an upper arched surface (P2), while both ends of the new element (P) are closed each by a wall (P3). Three lower edges (P4) of the new element (P) has enlarged supporting base provided with relieves or couplers (P4a) fit for allowing the connexion and the fixing of the new connecting and plugging element (P) to the metallic bars (Ar) of the reinforcement of the floor, while the lower edge has no enlarged base in order to allow that the element (P) is flanked to a beam or to an existing edge foundation. <IMAGE>
