Abstract (en)
[origin: WO2004047606A1] The invention provides a wiping article which is suitable for the cleaning or dusting of hard surfaces, the article comprising a laminated substrate having a core layer sandwiched between dusting layers, the core layer comprising an absorbent fibrous matrix entrapping dried surfactant, and the dusting layers comprising a polymeric fibrous web having a capillary structure which permits uptake of water and release of the surfactant when the article is wetted. Preferably the absorbent fibrous matrix of the core layer is formed from wood pulp fibres, the polymeric fibrous web of the dusting layers is formed from polypropylene fibres, and the dried surfactant is an amine oxide. When dry, the wiping article is especially effective for the entrapment and removal of dust and other particulate soil. When wetted, the wiping article is especially effective for cleaning and degreasing.
