Abstract (en)  
[origin: US2006081759A1] Disclosed is an arrangement for producing molded concrete bricks, comprising an insert (EI) that is disposed in an insert support which is fastened within a molding machine. Said arrangement is provided with an advantageous structure in the form of a hollow case that encompasses recesses (AP) so as to insert the arrangement into a base plate (GP) and a cover plate (DP). More specifically, the invention relates to particularly advantageous embodiments for producing the insert (EI) from folded metal sheets, fixing the insert (EI) inside the insert support, and fastening the insert support within the molding machine.
