Abstract (en)

[origin: WO2004048720A2] The invention relates to a fence (10) including upstanding posts (12) top, mid and bottom rails (16,70,14), extending between the posts (12) and an infill in the form of upstanding elements (20) or a wire mesh (62) extending between the rails (14,16,70) and/or the posts (12). A plurality of spikes (18) extend generally upwardly from the rails (14,16,70). A structural fence element (210) is also provided which includes a slab (212) or coping (228) of concrete or plastic, in which a protrusion (216) is embedded in part, with a sharp edge (218) of the protrusion (216) extending generally upwardly from the slab (212) or coping (228). The invention extends to methods of making the fence (10) and structural fence element (210).
