Abstract (en)

[origin: WO2004042283A1] The invention relates to previously known cooking hobs, particularly gas cooking hobs, and methods for operating a cooking hob comprising at least two cooking points (1, 2, 3, 4) and at least one electronic control component (13, 14), at least one second cooking point ((2, 3, 4) being located at a greater distance from the electronic component (13, 14) than a first cooking point (1). In order to increase the serviceability of said cooking hob, the first cooking point (1) is rendered inoperational or the calorific output (P1) thereof is reduced when a temperature (TK) of the electronic component (13, 14) exceeds a threshold temperature (T1) while the second cooking point (2, 3, 4) remains operational or the calorific output (P2, P3, P4) thereof remains unchanged.
