Abstract (en)

[origin: WO2004046201A2] The invention relates to a method for exchanging data between an electric device and a user interface via a data network. According to said method, data containing control or status information is exchanged between the electric device (2) and the user interface (20) in the form of data packets. A complete data record containing all the control information that is relevant for the control of the device (2) is transmitted with each data packet transmitted from the user interface (20) to the electric device (2) via the data network (18). In addition, a complete data record containing all relevant status information is transmitted with each data packet that is transmitted from the device (2) to the user interface (20).
