Abstract (en)

[origin: EP1566147A1] The ancillary has a grater (1) forming a proximal part of a femoral sleeve and presenting an active part (2) corresponding to upper one third of the sleeve. Another grater forms a distal part of the sleeve and presents an active part corresponding to lower two third of the sleeve. A proximal lower one third of the distal part corresponds to the active part of the latter grater, so that the latter grater operates in distal part.
