Abstract (en)
[origin: EP1566357A1] An elevator apparatus has a cage that is raised and lowered within a hoistway. The cage has a cage main body that is provided with a cage entrance, and a ceiling portion that is provided in an upper end portion of the cage main body. The ceiling portion is upwardly and downwardly movable between a normal operating position located at the upper end portion of the cage main body, and a getting on/off position that is lower than the normal operating position within the cage main body. The landing hall is provided with a landing hall side control switch portion for moving the ceiling portion upward and downward. <IMAGE>
