Abstract (en)

Method for gasifying organic material in a reactor (2) in which particles (26) are provided, made of a material with a large thermal capacity, characterised in that this method consists of gasifying the organic material by means of heating in a gasification chamber (17) in the reactor (2); of letting a gas flow through the reactor (2), from an inlet (7) to an outlet (8); of letting the particles (26) circulate through the reactor (2), in counterflow with the above-mentioned gas; and of collecting the gasified organic material at the above-mentioned outlet (8). <IMAGE>
