Abstract (en)  
[origin: EP1566818A1] An insulator for holding fencing material (3) with an electrical conductor in position. An insulating body (4) from electrically insulating material is provided with a passage (5) through the insulating body for receiving a portion located in the passage of the fencing material extending through the passage (5). The passage (5) extends in an axial passage direction (7) between opposite end surfaces (8) of the insulating body (4). A bushing (12) from electrically insulating material extends around at least a part of the circumference (6) of the passage (5). The bushing, or a change in color or hue obtained in a different manner marks a boundary around the passage. A method for manufacturing such an insulator is also described.
