Abstract (en)  
[origin: WO2004041391A1] A remotely controlled toy includes a body (21) resembling a dog within which a conventional remote control receiving (50) and drive apparatus (60) is supported. A plurality of wheels (42 and 43) provide rolling movement and directional support for the remotely controlled toy animal. A hand-held controller (30) is manipulated by the user to provide the desired control signals to remotely control the movement and direction of the toy animal. An elongated flexible wand (25) includes a first end secured to the toy animal body (21) and a further end supporting a butterfly ornament (28). The flexible character of the wand (25) allows the butterfly ornament (28) to move in response to movement of the remotely controlled toy animal. This provides a play pattern in which the toy animal appears to chase the butterfly ornament (28).
