Abstract (en)
[origin: WO2004043787A2] The invention relates to a device for stacking flat, rectangular bodies, particularly folded pallet collars. Said device is characterized by the fact that it comprises at least three planar elements forming a cage-shaped frame that is provided with a bottom part (10) and at least two lateral parts (20; 30) which are aligned at a certain angle from each other via a common connecting edge (60) while at least one lateral part is provided with a recess which extends upwards from the bottom part (10) and runs essentially parallel to the connecting edge (60).
