Abstract (en)
[origin: FR2848043A1] The module has a reception host (1) for receiving an incoming digital data in a predetermined format. A descrambling unit descrambles a scrambled data contained in the incoming data. A demultiplexer demultiplexes the incoming data. An encoder encodes the data in another compression format. The signals are stored in a storage unit and transmitted into digital television. Independent claims are also included for the following: (a) a system for receiving and processing digital signal (b) a method for receiving and processing a digital signal.
