Abstract (en)
A seating unit (1) includes a frame (2), a seat (4), and a pair of armrests (6) movably mounted to the frame for movement between forward and rearward positions. The armrests are biased into the forward position, and each armrest includes a device (17) selectively retaining the armrest in the rearward position. Movement of the armrest releases the device such that the armrest moved to the forward position due to the bias. <IMAGE>
