Abstract (en)
The machine comprises a drum (22) which is pivotally supported on respective front-end cross-pieces (14, 16) and houses a plurality of compaction chambers (24) open to one loading, axial end of the drum (22) which is hinged to one first cross-piece (16). A transverse plate (20) is arranged close to said loading end of the drum and is integral with the first cross-piece (16). The cross-pieces (14, 16) are mutually connected to each other along a longitudinal direction by two pairs of tie rods (36, 38) which are arranged between respective ends of the cross-pieces, against a spacing member (40, 42) and a plurality of removable, register spacers (44, 46) which are longitudinally clamped between the supports. <IMAGE>
