Abstract (en)
[origin: EP1568644A1] In an elevator apparatus, a car deflector sheave that guides main ropes from a driving sheave to a car, and a counterweight deflector sheave that guides the main ropes from the driving sheave to the counterweight are disposed in upper portions within a hoistway. The driving sheave, the car deflector sheave, and the counterweight deflector sheave are disposed such that their rotation axes extend in parallel with each other. A driving apparatus is disposed in a position which is located lower than the car deflector sheave and the counterweight deflector sheave and where the driving apparatus does not overlap with an upper beam in a vertical projection plane thereof. <IMAGE>
