Abstract (en)

[origin: EP1568833A2] The plate has a functional area (12) and a guide rail (14) as well as an opening (16) for a closing pin (18) of a driving bar fitting. The guide rail is essentially longitudinal along the direction (20) of the closing metal run, having a second functional area (22). An adjusting channel (24) has a second opening (26) for an adjuster (28) where an adjusting channel is perpendicular to the longitudinal direction of the closing sheet. A third functional area (30) connects to the connection of the closing metal run with a window frame. A fourth functional area (34) allows adjusting movement between the first and second functional areas (12, 22) in relation to a base element (32). The adjusting movement is made at two locations at the front side with the first and second functional areas connected.
