Abstract (en)
[origin: EP1568855A2] The cam shaft adjustment device has a stator and a rotor which is placed relative to each other and are rotatable. The stator has wings with their faces sealing against a surface of the rotor. The wings of the rotor have, within the range of its faces (9) its largest width, and that the sides (12, 13) a part of their length being concave. The concave curved part of the sides are curved over an outward running section (18, 19) into the face of the wings.
