Abstract (en)

[origin: EP1569054A2] A target value processing unit, includes: an input section to which a target value signal showing a target value of a control process is inputted (2); a target value shaping unit (6) shaping the target value signal inputted to the input section, into a signal form which is proper for a control treatment of a regulator (3) implementing the control process; and an output section (1b) outputting to the regulator a shaped target value signal which is shaped by the target value shaping unit. The target value processing unit realizes the high-level control process without improving the regulator.
