Abstract (en)

[origin: WO2004054534A1] The present invention relates to the use of an extract of decaffeinated coffee grains in the preparation of a composition intended to correct or prevent the disorders associated with a greasy skin in particular by an action diminishing the secretion of the sebum by topical administration. The invention relates in particular to cosmetic compositions intended for administration by the topical route. The invention also relates to a cosmetic procedure for correcting or preventing the disorders associated with a hyperseborrhea.
