Abstract (en)
[origin: WO2004050270A1] A rolling device for rolling a self-contained endless band (10) for a metal push belt, which is provided with a first and a second rotatable supporting rollers (6, 7) around which the band (10) is intended to be placed and held in an elongated form, the second bearing roller (6) being accommodated in a movable manner in the device during the rolling of a band (10), with a rolling roller (11) that is contact with the band (10) and with a pressure roller (13) that by way of a support roller (12) is in contact with the first bearing roller (7), which opposite the rolling roller (11) is in contact with the band (10) and in which device a pushing force (Fu) can be generated between the rolling roller (11) and the first bearing roller (7), to which pushing force the band (10) is subjected.
