Abstract (en)

[origin: US2005205192A1] To provide a labeling device for moved objects, comprising a stamp which is displaceably guided and by means of which a label is positionable on an object, with which a high reproducibility of the labeling operation on moved objects is achieved, a measuring device for detecting a stamp displacement time is provided, and the stamp displacement time is determined by the length of time of the movement of the stamp towards the object.
