Abstract (en)

[origin: DE10256703B3] Production of a fuel high pressure storage unit comprises extruding a hollow profile of a tubular base body (2) with connecting strips (5) and/or fixing strips (7). Preferred Features: Excess material is removed from the connecting strips using a separating process to leave individual connecting supports or excess material is removed from the fixing strips using a separating process to leave individual fixing elements. The surface is reinforced by cold forming the storage unit.
