Abstract (en)
[origin: FR2848661A1] Aircraft (A) terrain anti-collision equipment comprises sensors (W, C) for signaling a risk of collision with the ground when the terrain extends into their detection volume. The equipment also comprises a further sensor (L) that is designed to permit a resumption of a normal route that permits issuing of advice or a command to the flight crew indicating a resumption of the normal flight path. Such a command is issued when there is no terrain detectable within the detection volume of the sensor.
