Abstract (en)

[origin: WO2004028810A1] The invention relates to a device for setting the contact pressure between a displaceably mounted first roller and at least one second roller and/or for placing or removing the first roller against/from the second roller in a printing press. The inventive device comprises at least one actuator, which can be subjected to the action of a pressure medium and which presses the first roller with an adjustable force toward the second roller, whereby the pressure of the pressure medium can be adjusted by a valve. A switchover device is also provided with which the valve can be connected to different actuators as desired.
