Abstract (en)  
[origin: EP1571103A1] The device has a wall (3) rotatable relatively to another wall around a rotational axis (7). The wall (3) has a peripheral edge (51) having a portion that is in watertight engagement with an inner surface of a housing, when the wall (3) is rotated around the axis. The wall delimits an outlet orifice (14) for permitting distribution of a cosmetic product in response to a decrease of an angular gap defined between the walls. An independent claim is also included for an assembly including two product distributing devices.
