Abstract (en)
[origin: EP1571113A1] In an elevator apparatus, a pair of supporting beams are secured at a distance from each other in an upper portion inside a hoistway. A machine base for supporting a driving machine and a deflection sheave is secured on the supporting beams. The driving machine is disposed on a lower portion of the machine base so as to be positioned between the supporting beams. A main rope is wound around a drive sheave and the deflection sheave by a double-wrap method. <IMAGE>
