Abstract (en)
The invention relates to a device for crushing and/or cutting material, comprising a frame (2-3) to be coupled to the jib of an excavator or the like, a first jaw (12) to be connected to the frame (3), which takes up a fixed position with respect to the frame (3) during operation, a second jaw (13) that mates with said first jaw (12), which second jaw (13) is pivotable about a pivot pin (10) with respect to the frame (3) in a direction towards the first jaw (12) and in a direction away from the first jaw by means of a setting cylinder (8), said first jaw (12) being provided with coupling means (21a,21b) that are to interlock with coupling means (20a,20b) forming part of the frame (3) for hooking the first jaw (12) to the frame (3). <??>The object of the invention is to provide a device, which device on the one hand is of simple construction, comprising few parts, and by means of which furthermore the assembly of jaws (12,13) can be connected to and disconnected from the frame (3) in a quick, reliable manner without having to carry out time-consuming adjusting operations. According to the invention, the coupling means comprise two spaced-apart points for engagement (21a,21b), where the first jaw (12) and the frame (3) can interlock, and fixing means (23) are furthermore provided for keeping the coupling means interlocked. <IMAGE>
