Abstract (en)

[origin: EP1571275A2] A building scaffolding is erected in sections, each section being supported by and resting on the previous section. The second and third section respectively are presented and secured esp. from the front and at right angles to the neighbouring scaffolding and the plane formed by a temporary platform beam. The second and third sections are also detachable from a vertical section of scaffolding and are raised into position as a single unit, sliding against the main scaffolding.
